

## Neo-Natal Crib Cover

Crib covers should consist of two x 80 x 80 panels of fabric with a triangular insert of 60cm. There should be two pieces of fabric for each cover, the internal fabric should be dark, ideally navy or black while the exterior can be patterned. These sizes are approximate, however covers smaller than this will not be suitable.

Each crib has an attachment to allow the cover to be secured over the crib. This consists of a pole, thus all covers should have an insert stitched into the top of the cover to allow the pole to be inserted.

Covers can also be weighted, with curtain weights securely stitched into the bottom of the sides that hang over the cot.

The bottom of this triangular insert should be 60 cm

These square sections should be 80 x 80 cm
